History

Our story begins with the warm reception we received from the flower and foliage industry after several years looking for job opportunities. The first step was taken in the domestic trade when we ventured into it with our initial products. This experience allowed us to acquire enough knowledge to expand beyond the borders of our country, Colombia, which is a powerful house in flower exports. It motivated us to put our products directly into the hands of our foreign customers. Thus, the family legacy of The Green Genie was born, Starting our commercial export activities in 2022. Our main focus is the production of foliage, and through perseverance and unity, we offer high-quality products such as ruscus, hypericum, cocculus, baby blue eucalyptus, among others. We are located in the municipality of Cachipay, Cundinamarca, and we have a dedicated team that handles the entire process of planting, cultivating, carefully cutting, and selecting stems for export.
